

# How to protect your dog from leptospirosis

## How do dogs catch it?

Leptospirosis is caught from stagnant water, like puddles or ponds.

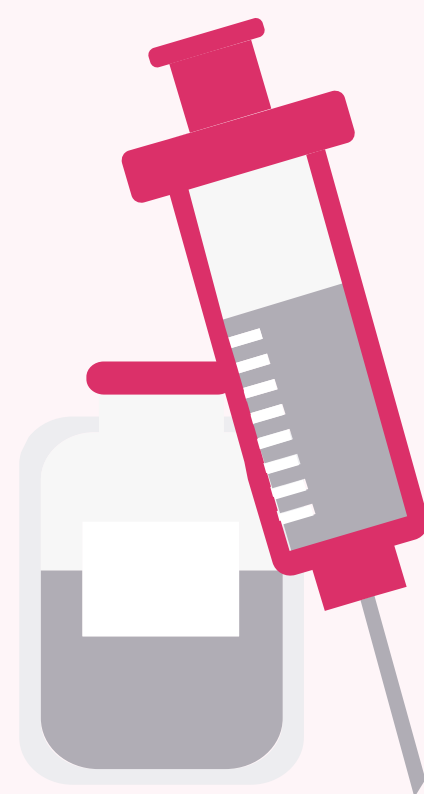

## Signs to watch for

- Fever
- Lethargy
- Vomiting or diarrhoea
- Muscle pain
- Loss of appetite

## How to prevent it

- Keep your dog vaccinated (including annual boosters)
- Don't let your dog drink from or swim in stagnant water
- Be careful on rural walks where the risk is higher

## Act fast

If your dog shows any symptoms, contact your vet. Early treatment is vital.

**Leptospirosis vaccines are included in Pet Health Club membership, so join today**
